

**First: Thank you very much for reading this and making us sound good !!**

1. We bring our own in-ear system, mic splitters and kemper amps.
2. We have no guitar or bass cabinets and don't need any monitor wedges.
3. We bring our own mics&stands. We do the in-ear mix ourselves.
4. We hand you our signals from our 5m long split snake from the rack.
5. Please give us an aux-out with your talkback so we can hear you.

🥁 We're happy to share a drumset if available.

🎤 You can mic the drumset with your own mics. We just add a kick and overhead mics for our in-ear mix.

We're easy to work with. If you have questions, please call us anytime.

**Sound** 🎧

- We love delays, reverbs and effects. You can go crazy, if you like it to!
- The two guitars can be panned left and right, a bit.
- We like compressed Vocals

**Lights** 🌟

- We love heavy light shows
- You can go crazy with fog, strobes, lasers, pyros, ...
- You can shut down the front light for a better light show. Nobody wants to see our faces anyway. ;-)

**Channels**

- 01 Kick
- 02 Snare
